## Towards an automatized data analysis of large 3d volumetric data (12 min talk + 3 min discussion)

Thursday, 15 April 2021 10:15 (15 minutes)

Recent developments in bio-imaging technologies have allowed researchers to collect larger and larger tomographic datasets which contain an immense amount of details. To achieve a quantitative understanding, however, these datasets need to be cleaned-up and segmented. These two tasks are tedious, very time consuming, and still performed mostly manually. In our work we aim to develop a full workflow from 3D image pre-processing to DL-based 3D segmentation and analysis of large volumetric datasets. Here we present the pre-processing pipeline, including handling of metadata, the plan for the implementation of the segmentation tools and an example of large volumetric data analysis.

## Poster title

**Primary authors:** CURCURACI, Luca (Max-Planck-Institut für Kolloid- und Grenzflächenforschung); KÜH-BACH, Markus (Fritz Haber Institute, NOMAD Laboratory); SEIDEL, Ronald (B CUBE - Center for Molecular Bioengineering); FABAS, Nicolas (Max Planck Computing and Data Facility); MAREK, Andreas (Max Planck Computing and Data Facility); RAMPP, Markus (Max Planck Computing and Data Facility); POLITI, Yael (B CUBE – Center for Molecular Bioengineering); FRATZL, Peter (Max Planck Institute of Colloids and Interfaces); WEINKAMER, Richard (Max Planck Institute of Colloids and Interfaces); BERTINETTI, Luca (Max Planck Institute of Colloids and Interfaces)

**Presenters:** CURCURACI, Luca (Max-Planck-Institut für Kolloid- und Grenzflächenforschung); KÜHBACH, Markus (Fritz Haber Institute, NOMAD Laboratory); BERTINETTI, Luca (Max Planck Institute of Colloids and Interfaces)
