

From BiGmax to FAIR Data Sciences

Monday, 11 April 2022 14:15 (1 hour)

A FAIR research data management is of fundamental importance for new discoveries in materials science and related disciplines. This is even more so in case “FAIR” is interpreted as “Findable, and AI Ready”. In order to facilitate the process to a FAIR data management across all scientific disciplines and to leverage the hidden treasures in available experimental and computational data sets, Germany has established the National Research Data Infrastructure (NFDI). In this talk, we will particularly discuss those NFDI consortia and their goals, that have close links to, or even have their roots in, BiGmax.
