NFDI4plants (DataPlant) - An NFDI consortium of plant research

Friday, 21 April 2023 16:30 (30 minutes)

DataPLANT's main goal is to provide its community with the tools and infrastructure to store, process, and share data in a FAIR (Findable, Accessible, Interoperable, Reusable) manner. The core element of DataPLANT's Research Data Management (RDM) system is the Annotated Research Context (ARC), which has a single-entry point logic starting with the input of data and metadata, allowing the integration of computational workflows, has storage and versioning functionality and allows an automated upload to repositories.
