

NFDI4Earth - the NFDI for Earth System Sciences

Thursday, 20 April 2023 09:30 (30 minutes)

NFDI4Earth is trying to bring together a Earth System Sciences through a diverse and large consortium of more than 60 institutions. The project is setting up a OneStop4All as a first contact point to find solutions for Earth System Science related data management tasks, connecting to important data portals, infrastructure providers and a User support network. The consortium has opened calls for pilot and incubator projects to activate the community and implemented an academy. The role of the MPI-BGC is in observing and developing “Advancing Tools” for large-scale geo-data processing.
