

NFDI4BioDiv

Friday, 21 April 2023 11:00 (30 minutes)

NFDI4Biodiversity is one of the consortia under the umbrella of the National Research Data Infrastructure (NFDI) and dedicated to mobilize biodiversity and environmental data for collective use.

The consortium includes close to 50 scientific institutions, museums, natural history societies, state offices, and other institutes and expert groups. They pool their scientific and technical expertise to provide a broad service portfolio for handling biodiversity and environmental data and to develop it further. The cooperation is guided by the knowledge that stakeholders in science, politics, nature conservation and landscape management need reliable data to be able to develop better contributions to the conservation of biodiversity.

To this end, the consortium partners offer added value to the professional community, specifically:

- Access to modern technologies and a comprehensive stock of biodiversity and environmental data
- Methods and tools for archiving, publishing, searching and analyzing data that are suitable for everyday use and have been tried and tested in practice &
- An expert forum for the safe and competent handling of data for broad and responsible use
