

Text+

Thursday, 20 April 2023 12:00 (30 minutes)

Language and text-based research data are of great importance in many disciplines in the humanities. Initially with the data domains Collections, Lexical Resources and Editions, Text+ addresses the requirements of a wide range of research fields. Therefore, it will systematically expand its data portfolio. This also includes tools to support researchers in the FAIR creation, use and provision of data throughout the entire research data life cycle.

The usability of the data and tools are central tasks of Text +. As a distributed infrastructure, Text+ relies on and incorporates a wide range of existing data and tools from the currently more than 30 partners in the consortium.

Goals

- Development of a distributed infrastructure for speech language and text data
- Support of researchers in the creation, re-use and preservation of language and text data
- Enable innovative research through easy access to research data and tools
- Close cooperation with the communities involved: portfolio expansion, training, workshops
